IDENTIFIERS	*Arizona

ABSTRACT

This study addresses Arizona dropout rates for individual schools, school districts, counties, and the state categorized by grade, gender, and ethnicity. In addition, the data include actual student enrollment and dropout counts. Dropout rates are reported for grades 7 through 12 based on a calendar year that begins the first day of summer recess and ends the last day of school. Because Arizona law allows districts 5 years to amend their data, enrollment data reported by districts may not necessarily agree with the enrollment data reported. The total statewide student enrollment for the academic year 1999-2000 was 366,000 students in grades 7 through 12, including those students in upgraded high school classes. Of those students, 30,545 dropped out by the end of the school year, resulting in a statewide dropout rate of 8.3%. When compared to dropout rates from previous years, this rate does not represent significant change. Males were more likely to drop out than females, and American Indians had the highest dropout rate of any ethnic group, followed by Hispanic American students. Appendixes discuss the comparability of Arizona rates to those of other states, and provide high school and elementary school cross references for school data. (SLD)

Research and Policy Division
Mission Statement

The Research and Policy Division (R&P) is a nonpartisan research arm of the Arizona Department of Education whose mission consists of three major components. First, we are committed to supporting local school districts and charter schools. The R&P division engages in aggressive outreach in order to incorporate local inputs into all of our work. Our goal is to develop a research infrastructure to allow for a proactive approach to researching important educational issues. Second, we endeavor to establish a productive dialogue with policy makers at all levels. Third, we are dedicated to producing quality research. R&P is responsible for conducting various program evaluations and independent research studies, and completing mandated reports such as the *Dropout Rate Study*.

EXECUTIVE SUMMARY

The annual calculation of dropout rates in the State of Arizona results from a cooperative effort between local school districts and charter schools, the Arizona Department of Education (ADE), the Arizona State Legislature, and the United States Department of Education. Presently, the emphasis on education reform mandates greater attention to performance measures, such as the dropout rate, which can serve as a key indicator of a school's success in educating its student population. This study, which includes the 1999-2000 school year, addresses dropout rates for individual schools, districts, counties, and the state categorized by grade, gender, and ethnicity. In addition, the data presented herein includes actual student enrollment and dropout counts, as well as status unknown rates.

* * * * * * * * * * * * * * *

For this study, dropout rates are reported for grades 7 through 12 and are based on a calendar year that begins the first day of summer recess and ends the last day of school. The total number of students enrolled during this time period is used as the population figure against which a count of dropouts for that school is compared.[1] Because Arizona law allows school districts five years in which to make necessary corrections to their data, enrollment data reported by districts may not necessarily agree with the enrollment data reported herein.

It is important to note that this particular study produces a "snapshot" of Arizona dropout activity and provides information only on students who drop out during the 1999-2000 school year. Arizona's *Graduation Rate Study*, however, is a longitudinal study that tracks graduate and dropout activity over a four-year period for a particular cohort of students.

For purposes of this study, **dropouts** are defined as students who were enrolled in school at any time during the school year, but were not enrolled at the end of the school year and did not transfer to another school, graduate, or die. **Summer dropouts** are defined as students who were enrolled at the end of the prior school year, failed to enroll at the beginning of the following school year, and did not graduate, transfer, or die during the summer. Summer dropouts are regarded as members of the grades in which they were *expected* to enroll; for example, a student who drops out during the summer following grade 10 is regarded as a summer dropout for grade 11 at her school.

Overview

According to information reported by local school districts and charter schools, the total statewide student enrollment for academic year 1999-2000 was 366,060 students in grades 7 through 12, including students in ungraded high school classes. Of those students, 30,545 dropped out of school by the end of the academic year, resulting in a statewide dropout rate of 8.3 percent. When compared to dropout rates from previous academic years, 1999-2000 dropout rates do not represent significant changes.

Taken together with data from previous reporting years, these data do not represent significant changes in dropout rates.

---

[1] It should be noted that this measure of enrollment, often called "students served", is in most cases greater than the October 1 Enrollment count for a school.

Statewide dropout rates for academic years 1995-96 through 1999-2000 are shown in **Table 1** and **Chart 1**.

Table 1
Dropout Rates by Grade for Previous Report Years

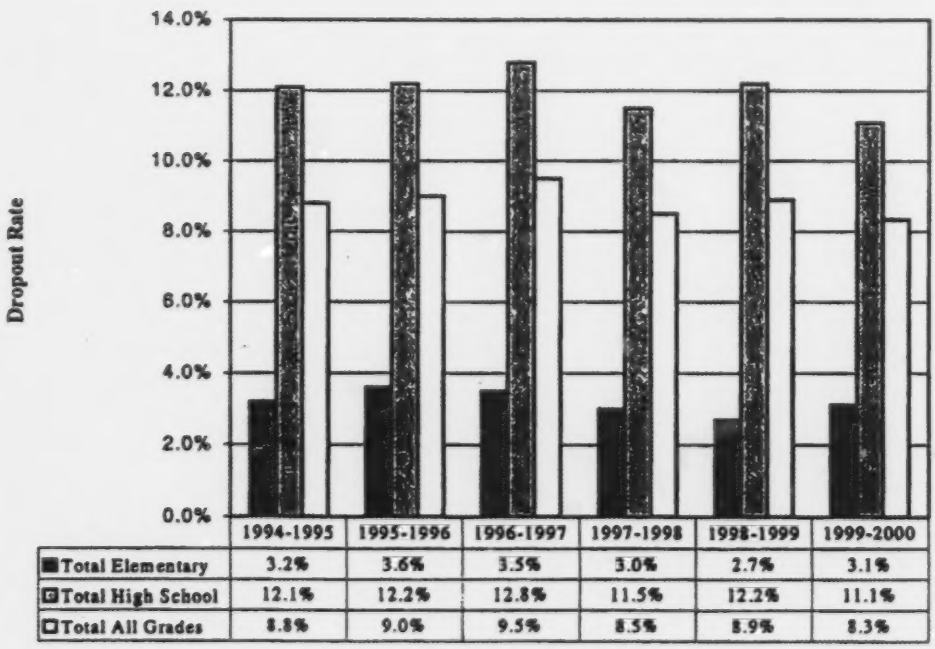
Arizona Dropout Rates by Grade for the Previous Report Years



INTRODUCTION

The ADE collects dropout statistics in response to the need for more accurate, comparable, and timely student dropout information from public schools, districts, and charter schools. Completion of the Dropout Rate Study involves the cooperative efforts of local school districts, charter schools, the ADE, the Arizona Legislature, and the United States Department of Education (USDOE). The present emphasis on education reform demands greater attention to performance indicators. Dropout rates in particular are frequently regarded as key indicators of the success or failure of the Arizona public school system. Successful school completion is both a state and national goal of education reform efforts.

Dropout Data: Arizona's Reporting Requirement and Reporting Period

All Arizona public school districts and charter schools that provide instruction to students in grades 7 through 12 are required to submit dropout data annually. The dropout rate study measures the proportion of students who drop out of school during a twelve-month period, which begins the first day of summer recess and ends the last day of school. Dropout data collected under Arizona law do not meet current federal dropout data definitions and guidelines set forth by the USDOE. Thus, Arizona statistics ***are not comparable*** to dropout statistics from other states using the USDOE standards.[2]

Definitions

Enrollment is defined as the total count of students who were enrolled at any time beginning on the first day of summer recess in 1999 through the following school year, and is used as the population figure against which dropouts are subsequently counted. Moreover, enrollment is regarded as a roster that changes continually (even during the summer months) as students enroll, transfer to other schools, dropout, or graduate. Schools are responsible for monitoring and reporting their enrollment from the end of the prior school year to the last day of the reported school year. Students who are promoted from elementary feeder schools become the responsibility of the high schools in which they are expected to enroll.[3]

An unduplicated enrollment count is used to calculate dropout rates more precisely at different levels of analysis. For example, a student who attends High School A in District X has the potential to be a dropout from that school and is counted as one student served at High School A. If that student transfers midyear to High School B, **within the same district,** the student now gains the potential of being counted as a dropout at High School B, and is therefore counted as a student served at High School B. However, at the **district level,** the student should count as only **one** student served by District X in calculating the **district** dropout rate. The means of ensuring an unduplicated student count at each level have been built into the enrollment codes used by schools and districts statewide.

---

[2] See Appendix A for a discussion of why Arizona's dropout rate is not comparable to the USDOE definition and definitions used by other states.

[3] An exception is for a subset of ninth grade students transferring to a union high school district; see the statement that follows in the subsection labeled, *status unknown rate.*

Ungraded secondary includes students who are assigned to secondary classes or programs without a standard grade designation.

Dropouts are defined as students who were enrolled in school at any time during the school year but were not enrolled at the end of the school year and did not transfer, graduate, or die.

Summer dropouts are defined as students who were enrolled at the end of the prior school year but failed to enroll at the beginning of the following school year and did not graduate, transfer, or die. These students are counted as summer dropouts from the grades in which they were *expected* to enroll.

Withdrawal type represents the unique withdrawal classifications used by school districts and charter schools to provide insight into some of the conditions associated with student dropouts. These specific codes differentiate affirmative dropouts (i.e., students who deliberately drop out of school, are expelled and fail to return, or leave school due to illness) from students whose status is unknown. It is important to distinguish between affirmative dropouts and students whose status is unknown, because these situations differ from each other and require different courses of action to reduce the dropout rate.

Dropout rate is defined as the ratio of dropouts to the total enrollment, expressed as a percentage. The number of dropouts in any particular district, grade, gender, or racial/ethnic category is compared to the total enrollment in the same subgroup.

Status unknown rate is defined as the ratio of status unknown students to the total enrollment, expressed as a percentage. A student is coded as status unknown by a school district after accruing 10 consecutive days of unexcused absences or when the student's status or location is unknown to the district. Status unknown students are a subset of the dropout population.

Please note that, in the case of union high school districts, students whose status is unknown for their entire ninth-grade school year are excluded from analyses (i.e. enrollment, dropout, and status unknown rates). This adjustment has been made because such students are regarded as never having attended the district in question. Statewide, a total of 941 students fell into this subset for academic year 1999-2000. It should also be noted that, while the exclusion of these students represents a change in methodology from that previously employed for Dropout Rate Study reports (the methodological change was first implemented in the 1998-99 report), the change has no significant impact on statewide rates. Thus, statewide rates for 1999-2000 and previous academic years are comparable.

Applying the Dropout Definition

In general, a student is not counted as a dropout if there is documented evidence of transfer to another elementary or secondary school. Some examples of applying the dropout definition to determine a student's status are given below.

The following students are **not** counted as dropouts:

- Students who leave school but return before the end of the **same school year**
- Students who are remanded to the Arizona Department of Juvenile Corrections (ADJC)

- Students who transfer to home-taught programs approved by county superintendents
- Students who do not return to school because they completed graduation requirements during the summer or at mid-year
- Students who enter early college admissions programs before graduating from high school, if they are enrolled in a full-time program leading to a postsecondary degree

The following students ***are*** counted as dropouts:

- Students who leave school and there is no documented evidence of transfer to another school, i.e., status unknown students
- Students transferring to education programs in schools with courses of study not meeting standard graduation requirements (e.g., GED preparatory classes, vocational certificate programs, technical schools), regardless of whether they earn their GED certificates
- Students who leave school and take correspondence courses, unless before the end of the same school year, they earn and transfer sufficient course credits to satisfy the graduation requirements of the schools in which they are enrolled

Transfer Documentation

The school record must indicate the withdrawal status of each student who leaves the school. Documentation of a student transfer to another school consists of either (1) a request from another school for a transfer of the student's records or (2) information from a responsible adult that the student is enrolled elsewhere.

Withdrawal codes used for students may change throughout the year as additional information becomes available. For example, a student whose status is unknown at the time of withdrawal is assigned a status unknown withdrawal code, but if a request is later received from another school for the student's records, the withdrawal code then would be changed to indicate a transfer to another school. The withdrawal status stated for students on each school's Year-End Enrollment Report reflects current knowledge at the time the report was filed.

Analysis

Year-End Enrollment reports are required by each Arizona school district or charter school that teaches students in grades 7 through 12 or in ungraded high school classes[4]. Throughout this report, the reader should note whether the population in each analysis refers to a single grade, the elementary grades (7 and 8), the high school grades (9 through 12 and ungraded secondary) or all grades (7 through 12 and ungraded secondary).

The enrollment count at each level represents an unduplicated count of every student enrolled for any length of time during the twelve-month reporting period. For example, a student who attended three different schools in the same district during a specific school year would be counted in enrollment at each school of attendance. However, that student would have been counted only once

[4] The reader should note that, for schools that enrolled students last year but are not listed in Table 7 or 8, no data was submitted by the district and/or charter school.

at the district, county and state levels. It is important to note that under Arizona law, school districts have up to five years in which to make necessary corrections or reviews to their enrollment data. Subsequently, school district and charter school data may not agree with the data reported herein.

Arizona Department of Education
Research and Policy Division

RESULTS:
1999-2000
Dropout Rates

Enrollment Count, Dropout Count, Dropout Rate, and Status Unknown Rate

The total student enrollment for academic year 1999-2000 was **366,060** students in grades 7 through 12, including students in ungraded high school classes. The total number of dropouts was **30,186**, representing a statewide dropout rate of **8.3 percent.**

Table 1 provides descriptive measures of dropout rates for individual grades and combined grades in the categories of elementary, high school, ungraded secondary, and all grades. Also provided are enrollment counts, dropout counts, dropout rates, and status unknown rates for individual and combined grades. The dropout rate was calculated by dividing the total number of students coded as dropouts by the total enrollment figure. The status unknown rate was calculated by dividing the total number of students coded as status unknown into the total enrollment figure.

Table 1
1999-2000 Enrollment Count, Dropout Count, Dropout Rate, and Status Unknown Rate by Grade

Grade/Category	Enrollment	Number of Dropouts	Dropout Rate	Status Unknown Rate
7	66627	1995	3.0%	2.5%
8	64955	2094	3.2%	2.5%

9	69246	6695	9.7%	6.0%
10	57159	6109	10.7%	6.3%
11	50952	5546	10.9%	6.2%
12	47968	5136	10.7%	6.2%
Ungraded Secondary	8794	2611	29.7%	15.5%
Total High School	**234119**	**26097**	**11.1%**	**6.7%**
Total All Grades	**365701**	**30186**	**8.3%**	**5.2%**

Dropout Rates by Withdrawal Type

Table 2 shows the proportion of dropouts attributed to each type of withdrawal by grade. Each withdrawal type represents a specific classification through which school districts and charter schools provide insight into some of the conditions associated with student dropouts. Each classification is unique and requires a different course of action to reduce the dropout rate.

Table 2
1999-2000 Dropout Count and Rates by Grade and Withdrawal Type

School-Year and Summer Dropouts

Dropout data submitted by schools must indicate whether students left during the school year or during the summer. The total numbers of school year dropouts, summer dropouts and the subsequent dropout rates are provided in **Table 3.**

Table 3
1999-2000 School-Year and Summer Dropouts as a Percentage of Total Dropouts by Grade

Grade/Category	School Year Dropouts	%	Summer Dropouts	%
7	1176	58.9%	819	41.1%
8	1488	71.1%	606	28.9%
Total Elementary	**2664**	**65.2%**	**1425**	**34.8%**
9	5960	89.0%	735	11.0%
10	5397	88.3%	712	11.7%
11	4834	87.2%	712	12.8%
12	4297	83.7%	839	16.3%
Ungraded Secondary	2424	92.8%	187	7.2%
Total High School	**22912**	**87.8%**	**3185**	**12.2%**
Total All Grades	**25576**	**84.7%**	**4610**	**15.3%**

Dropout Rate by Gender and Grade

The enrollment count, dropout count, and dropout rate by gender and grade is provided in **Table 4.** The dropout rate for females and males was calculated by dividing the total number of dropouts into the total number of students enrolled.

For example, in academic year 1999-2000, there were **112,351** female students enrolled in Arizona's public high schools. Of that, **10,782** high school females were coded as dropouts by local school districts. The total number of female dropouts was then divided into the total female enrollment, resulting in a **9.6 percent** dropout rate for female high school students.

Table 4
1999-2000 Enrollment Count, Dropout Count, and Dropout Rate by Gender and Grade

Grade/Category	Total Female Enrollment	Female Drops	Female Dropout Rate	Total Male Enrollment	Male Drops	Male Dropout Rate
7	32325	918	2.8%	34302	1077	3.1%
8	31850	951	3.0%	33105	1143	3.5%
Total Elementary	**64175**	**1869**	**2.9%**	**67407**	**2220**	**3.3%**
9	33438	2936	8.8%	35808	3759	10.5%

Total All Grades	**176526**	**12651**	**7.2%**	**189175**	**17535**	**9.3%**

Dropout Rate by Race/Ethnicity and Grade

The enrollment count, dropout count, and dropout rate are each shown by race/ethnicity and by grade in **Table 5.** Dropout rates are calculated by dividing the dropout count for each individual racial/ethnic group into each group's total enrollment.

For example, in the 1999-2000 school year, **129,503** White students were enrolled in Arizona's public high schools. Of that, **10,531** White high school students were reported as dropouts by local school districts, resulting in a **8.1 percent** dropout rate for White high school students.

Table 5
1999-2000 Enrollment Count, Dropout Count, and Dropout Rate by Race/Ethnicity and Grade

Dropout Rate by County

School district data were aggregated to calculate enrollment counts, dropout counts, and dropout/ status unknown rates by county and grade. **Table 6** provides dropout and status unknown rates by county, state, and an overall dropout rate for the students in state juvenile corrections facilities. The Arizona Department of Juvenile Corrections (ADJC) operates juvenile correctional facilities and serves as a school district for incarcerated students.

Table 6
1999-2000 Dropout Rate by County

County	Students Enrolled	Number of Dropouts	Grades 7-8 Dropout Rate	Grades 9-12 Dropout Rate	Overall Dropout Rate
Apache	6535	642	4.5%	12.9%	9.8%
Cochise	8170	495	2.4%	8.3%	6.1%
Cococino	9906	821	2.8%	10.0%	8.3%

Figure 1
1999-2000 High School Dropout Rates and Enrollment by County

Dropout Rate by District and School

School districts are identified by the grade range for which instruction is provided. *Unified* districts typically offer instruction in all grades, kindergarten through 12. *Elementary* districts offer instruction from kindergarten through grade 8. *Union high school* districts offer instruction in grades 9 though 12. *Accommodation* districts and *special programs* serve students with academic needs that cannot be accommodated within an existing type of district. Because of the various district types, aggregated school district data cannot be used for comparison purposes. For example, unified districts should not be compared to elementary school districts or union high school districts. However, data contained in **Table 7** and **Table 8** have been disaggregated (i.e. data from elementary and secondary school have been separated) so that accurate comparisons of disparate districts may be made within each table.

Table 7
1999-2000 District/School Dropout Rates
Grades 9 through 12

Table 7 contains the alphabetical listing of districts and schools that provide instruction in grades 9-12, dropout rates for districts and schools, and the status unknown rates for districts. Information pertaining to charter schools is designated with a † symbol.

Please note the sum of school enrollment may be greater than the district enrollment because the school level dropout rate formula takes into consideration student migration between schools in the same district. Also, in accordance with the Family Educational Rights and Privacy Act of 1974, data pertaining to five or fewer students have been replaced with an asterisk (*) to protect student privacy.

Table 8
1999-2000 District/School Dropout Rates
Grades 7 through 8

Table 8 contains the alphabetical listing of districts and schools that provide instruction in grades 7 and 8, dropout rates for districts and schools, and the status unknown rates for districts. Information pertaining to charter schools is designated with a † symbol.

Please note the sum of school enrollment may be greater than the district enrollment because the school level dropout rate formula takes into consideration student migration between schools in the same district. Also, in accordance with the Family Educational Rights and Privacy Act of 1974, data pertaining to five or fewer students have been replaced with an asterisk (*) to protect student privacy.

Table 8 contains the alphabetical listing of districts and schools that provide instruction in grades 7-8, dropout rates for districts and schools, and the status unknown rates for districts. Information pertaining to charter schools is designated with a † symbol.

APPENDICES

Appendix A: Why Are Arizona Dropout Rates Not Comparable To Those From Other States?

Appendix B: High School Cross-Reference.

Appendix C: Elementary School Cross-Reference.

APPENDIX A

WHY ARE ARIZONA DROPOUT RATES NOT COMPARABLE TO THOSE FROM OTHER STATES?

Consumers of information about dropouts are confronted with a variety of statistics from multiple sources. The purpose of the current paper is to outline how dropout rates are measured in Arizona, and to describe why comparisons between Arizona and other states are difficult to make.

Arizona Dropout Rate Definition

In Arizona, the collection of dropout rate data is mandated by the Arizona Legislature. The Arizona dropout rate includes all students who dropout out of school, either during the school year or during the preceding summer. The count of dropouts is assessed by comparing it to the total number of students who were enrolled at the end of the previous school year or at any point during the academic year in question. The ratio is described below, for a school's 1999-2000 dropout rate:

$$\frac{\text{Summer 1999 Dropouts + School Year 1999-2000 Dropouts}}{\text{Students Enrolled at the end of 1998-1999 + Students Enrolled at any point during School Year 1999-2000}}$$

Conceptually, the same ratio is applied at each level of analysis, including dropout rates for school, district, county, and state levels. The actual formula that is applied varies slightly depending on the level of analysis to prevent redundancy at higher levels.

NCES Dropout Rate Definitions

The National Center for Education Statistics (NCES) is a division of the United States Department of Education and focuses on collection and analysis of data pertaining to education in the United States. Each year, NCES publishes statistics describing dropouts (Kaufman, et al., 2000). The three types of dropout statistics reported by NCES are described below, including the data source for each.

Status Dropout Rates: Current Population Survey

Each month, the U.S. Bureau of the Census gathers sample data about the United States population through the Current Population Survey (CPS). Information gathered through this instrument includes demographics and workforce participation for each region. In October of each year, an education supplement is attached to the CPS. Information gathered through this supplement allows NCES to assess, among other educational issues, the proportion of the population age 16 through 24 who have not completed a high school program, regardless of when, or where, they dropped out. This proportion, the *status dropout rate*, can be used to describe the cumulative nature of our nation's dropout problem, as well as the demand for education and training specific to the needs of these dropouts. Through sampling, data collected each year are useful in describing status dropout rates by region; NCES also uses three-year averages to describe status dropout rates for each state. However, state-level status dropout rates are less useful as school accountability measures. While status dropout rates effectively estimate the number of dropouts in a state, because they do

not take into account *where* respondents dropped out, they do not directly assess the performance of schools in that state -- especially in states such as Arizona where the population is rapidly growing. It seems reasonable to assume that those individuals contributing to population growth in Arizona did not attend school in Arizona.

Event Dropout Rates: Current Population Survey

Also collected on the CPS education supplement is information about whether respondents dropped out in the previous twelve months. Specifically, a ratio is formed: the numerator consists of individuals age 15 through 24 who were reported as enrolled in Grades 10, 11, or 12 in October of the previous year (in a public *or* private school), but have since left school. The denominator consists of *all* individuals who were reported as enrolled in Grades 10, 11, or 12 in October of the previous year. Because these event dropout rates share the CPS as a data source with status dropout rates, they also share some limitations: regional rates may be computed for each year, while state-level rates may be computed as a three-year average (and, district-and school-level rates may not be computed at all). Event dropout rates estimated by using CPS data more closely reflect how effective educators in a state are at preventing students from dropping out. However, the CPS event dropout rate does not separate those who dropped out in Arizona and remained in the state from those who dropped out elsewhere and have lived in Arizona for less than twelve months. So, for state-level event dropout rates, rather than relying exclusively on three-year averages of sample data, it may be considered more appropriate to look to counts of event dropout rates, reported by states to NCES via the Common Core of Data, described next.

Event Dropout Rates: Common Core of Data

Definition. The Common Core of Data (CCD) is an annual survey administered by NCES to state education agencies. In addition to other information requested on the CCD, states report event dropout rates based on counts of students who have dropped out of public school. NCES defines the CCD event dropout rate as described below, for a 1999-2000 dropout rate:

$$\frac{\text{Students Enrolled at some point during the preceding 12 months, but are not enrolled by October 1, 2000, and did not transfer, die, or graduate}}{\text{Students Enrolled on October 1, 1999}}$$

As a part of this definition, those students not accounted for on October 1 are regarded as dropouts. For 1999-2000 school year event dropout rates, the numerator includes those individuals who were enrolled on October 1, 1999 and/or at any point during the following 12 months, but who dropped out and failed to re-enroll before October 1, 2000. Also considered dropouts would be those who dropped out over the summer of 2000.

Deviations from the CCD definition. Researchers have examined states' practices in the reporting of event dropout rates (Winglee, et al., 2000). Forty-six states event dropout rates were examined for years 1993, 1994, and 1995. Researchers identified three main ways states' reporting of event dropout rates deviated from the definition established by NCES (and therefore, the definitions of other states). First, states vary by **the reporting calendar** employed; while NCES defines a reporting period that begins October of each year (i.e. the first day of school), in 1995, sixteen states'

(including Arizona's) reporting periods begin in June of each year (i.e. the last day of school). Next, states vary by their treatment of students who drop out of school over the summer; these students were enrolled at the end of the previous school year, but fail to re-enroll for school in the Fall, and are not transfer students, deceased, or graduates. The NCES event dropout rate definition regards **summer dropouts** as having dropped out from the grade and year for which they failed to return (as does Arizona). In 1995, five states report summer dropouts as having dropped out of the grade and year for which they were most recently enrolled (i.e. when the school year ended). Lastly, states vary by their treatment of GED program students. NCES regards students who leave school for the purpose of receiving their GED as dropouts (as does Arizona); In 1995, six states deviated from the NCES definition and excluded GED students from the numerator of their dropout rates.

As can be seen in Figure 1, most states deviate from the NCES event dropout rate definition in one of the three identified ways: reporting calendar, summer dropouts, and GED students. Still others differ in multiple ways. Taken as a whole, the data presented in Figure 1 indicate the extent of variation in reporting practices.

Effects of deviation from the CCD definition. In addition to identifying how states deviate in the reporting of event dropout rates, NCES has examined the impact of different reporting practices on the magnitude of rates (Winglee, et al., 2000). When compared to the NCES definition, using a reporting cycle that begins in June (such as that used in Arizona) has been shown to result in a statistically reliable over-reporting of dropouts. Similarly, the exclusion of GED students from a state's dropout numerator has been shown to result in consistently lower event dropout rates. NCES proposes a methodology for comparing state-reported event dropout rates. However, when research on the effects of different reporting practices are coupled with the data represented in Figure 1, it is clear that differences in reporting practices seriously impact direct, state-level event dropout rate comparisons.

Conclusion

Clearly, a wide variety of data are available to one who must answer the question, *What is Arizona's Dropout Rate?* Given a percentage, those who responsibly report dropout rates to the public must be careful to consider the data source, as well as precisely what is represented in the ratio. Failure to consider this (often overlooked) information likely leads to a confused, ill-informed public. Similarly, selection of an appropriate dropout measure is critical to an informed discussion about education policy and school accountability. Given the measures available, it is most appropriate to utilize the Arizona dropout rate for accountability purposes in Arizona; it takes into account the total number of students that a school had an opportunity to keep in school. The Arizona dropout rate serves as a better accountability measure than would a measure of the recent educational history of the current population (such as the CPS Status and Event Dropout Rates) or would a measure using October 1st enrollment as its denominator (such as the CCD Event Dropout Rate).
